---

## Blade

---

The Blade table system was designed to provide unlimited table configurations using a flexible range of standard components.

Using one leg profile, one hub (either fixed or flexible) and one rail, the possibilities are never ending.

# Tables

## Blade

Simple aesthetics is key, creating an unobtrusive solution to allow people to use Blade in different settings and environments.

Blade is an entirely new table system that can create a variety of shapes and sizes (seated and standing) all built from the same leg and adjustable hub. From large multi-leg boardroom tables to nimble coffee tables, and everything in between, the Blade product family offers a complete workpoint solution with a clear consistent visual language throughout.

The system is structurally strong with the mild steel frame featuring a uniquely designed hub fixing plate.

Power and data requirements are accommodated through modules specifically designed for the Blade collection, with integrated cable management possible through the internal chamber of the base, eliminating the requirement for umbilical leads and Skyhook clip on cable management to the beams.

The table base structure is manufactured from mild steel and can be finished in powder coat, bright chrome as well as a specialised timber veneer variety. Table tops are a standard laminate colour or veneer, however options such as glass or custom client specification can be provided.

Blade has evolved to include the “Aero” leg for folding tables and small fixed utility tables. The folding tables use a high quality German designed and manufactured folding system.
